

IF YOU WORK OR

PLAY IN THE SUN,

TAKE A GOOD LOOK AT YOURSELF.

HARD FLAKY SPOTS ON YOUR SKIN COULD BE ACTINIC KERATOSIS. IF YOU SEE THIS PRECANCEROUS CONDITION, CALL ALLIANCE CLINICAL RESEARCH TODAY.

Actinic keratosis is caused by sun damage. These precancerous lesions are hard and scaly... not the brown kind, and usually appear on the forehead, cheeks, temples, and nose.

If you have this condition you could qualify to participate in an important clinical study.

- *You must be between 45 and 85 years old*
- *Be available to visit our Birmingham clinic up to five times*
- *Not be using any other topical medication*
- *You will receive \$1,000 compensation when you complete the study*

Research participants are needed now.
